

Temporary Prefabricated Classroom

[CHALLENGE]

A parish school was in need of additional classroom space to accommodate its growing student population and renovations. The building needed to blend with the existing traditional brick building and fit in the small area provided on the school grounds.

[SOLUTION]

Modular Genius leased a 920 square foot temporary modular classroom. Wooden ADA ramps were installed that lead to two separate classrooms. The project was completed in less than 60 days and the removal of a modular classroom only takes a few days.
