

Modular Drug Enforcement Processing Building

Leonardtown, MD

The Challenge

A local police department was been plagued with a rash of drug busts resulting in the confiscation of the highly toxic opioid medication Fentanyl. The police Captain was concerned for the well being of the staff in the police station processing the drug. He wanted a modular building set up quickly to move the opioid to an isolated space.

The Solution

Modular Genius, Inc. designed a modular building to process the drugs once received. The 30’ space was divided in half with a wall and door down the center. The drug processing side included a fume hood, eyewash station, table and wall sink. The other side was set up as an administrative area. The modular building along with pre-fabricated aluminum ramp and canopy was built and installed in 60 days from time of order.
