

Valet Parking Office

Reagan National Airport, Washington, D.C.

The Challenge

Reagan National Airport is constantly faced with over-crowded parking. The conversion of an existing lot into a valet parking lot was needed to help relieve the strain. Construction had to take place during the weekend so it did not interfere with the traffic during the regular work week.

The Solution

Modular Genius, Inc. manufactured, delivered, and installed the 1,440 square foot modular office building in 30 days from time of contract. The building functions as an office for the staff and a waiting room for the customers as they wait for their cars to be retrieved from the valet.
