

Modular Office Building for CK Construction

Columbus, OH

The Challenge

CK Construction needed office space to support operations at its Columbus, Ohio project site. The building had to be ready quickly, sized appropriately for an on-site team, and configured with enough separation to support both individual offices and shared collaborative space, without the delay of a ground-up build.

The Solution

Modular Genius provided CK Construction with a 1,440-square-foot modular office building for daily operations. The building includes four private offices, positioned in each corner of the building, a central open office area for shared workspace, and two restrooms. The building was on site on schedule which gave the CK Construction team a fully finished, move-in-ready workspace exactly when their project required it.
