

Church Sunday School Modular Swing Space

United States of America

The Challenge

A growing church was in need of additional Sunday School classroom space. Their tight budget required them to consider all options. A temporary portable classroom modular building was selected as the solution.

The Solution

Modular Genius designed and built a 1,440 sq. ft. relocatable classroom. The building features a central hallway which branches off into two large rooms. The large rooms could be divided further with an accordion wall. ADA compliant prefabricated steps and ramps were installed for accessibility.
