

Onondaga Lake Cleanup Visitors Center

Onondaga Lake, NY

The Challenge

Onondaga Lake in New York was in need of environmental remediation. The global contractor tasked to work on the cleanup required a visitors center to inform and educate the public on the process.

The Solution

Modular Genius and the contractor built, installed, and finished the 960 sqft modular visitors center building. Recycled building materials were used for the flooring. The exterior matched the geographic landscape. The building is open to the public during the remediation process.
