

Delaware State University Wellness Center

Dover, DE

The Challenge

Delaware State University had to relocate their 5,000 square foot Fitness Center to make room for the construction of a new building. Relocation had to take place immediately following school commencement and be completed prior to school starting.

The Solution

Modular Genius, Inc. dismantled and moved the 5,000 square-foot facility including free weights, treadmills, and other fitness equipment to an off-site storage facility. The modular building was dismantled and relocated across campus and then installed. All of the equipment was moved back into the facility. The project was a complete turnkey inclusive of utility connection.
