

## Charter School Temporary Modular Classrooms

Sabillasville, MD

### The Challenge

Sabillasville Charter School in Sabillasville, MD was in need of additional classroom space due to a large influx of new students. They determined that two modular classroom buildings would be the quickest and most cost effective solution. Modular Genius was contracted to design and install the buildings to meet their needs.

### The Solution

In response to the pressing need for expanded facilities, Modular Genius designed and built two 864 sq. ft. temporary modular classrooms, for a total of 1,728 sq. ft. of new learning space. Each modular classroom features a storage closet for learning supplies, and an IT closet to house necessary infrastructure equipment. The new modular classrooms were designed to be functional, durable, and easily accessible for all students. As such, ADA compliant ramps were installed. The modular classroom buildings were designed and constructed to meet the school's design, use, and space requirements, while also meeting Maryland's design and code requirements.
