

Public Elementary School Modular Classroom

Joppatowne, MD

The Challenge

A local elementary school needed additional classroom space to accommodate a growing student population. They determined that a modular classroom building was the quickest and most cost effective solution. Modular Genius was contracted to design and install the building to meet their needs

The Solution

Modular Genius, Inc. designed and built an 864 sq. ft. modular classroom building. The new modular classroom was designed to be functional, durable, and easily accessible for all students. As such, ADA compliant ramps were installed. The project took 15 days from site preparation to completion, and students were able to attend class on time for the new school year.
