

Modular Access Control Center

Baltimore, MD

The Challenge

The Maryland Port Authority was in need of a permanent modular building to facilitate security clearance at the busy City of Baltimore seaport. They needed an area that allowed discretion and comfort, but incorporated state of the art technology.

The Solution

Modular Genius installed a 1,890 sq ft modular building for the customer. The modular space included a lobby and privacy booths, as well as employee offices, data rooms, and a kitchenette.
