

# Modular Environmental Office and Classroom

Talbot County, MD

## The Challenge

Located in the waters of the Chesapeake Bay, this dredged material refuge serves as a place of learning as well as an expanding home for local wildlife. A temporary building was needed as offices for workers and a classroom for visitors. Minimal site disturbance and environmental impact was key.

## The Solution

Modular Genius provided a 4,884 sq ft temporary modular building that includes offices, an area for visitors and students, and even holding tanks for turtles that are sent to Maryland schools to raise and release. The prefabricated building will be easily relocated when the restoration project is complete.
