

Modular Office Delivered in One Day

Washington, DC

The Challenge

A government organization required a small, secure on-site office at its Washington, DC location to support administrative operations, with limited space available and a need for rapid deployment without a lengthy construction process. The solution needed to function as a ground-level government office, be suitable for short-term use with the potential for an extended lease, and be delivered and installed efficiently to minimize site disruption.

The Solution

A 160-square-foot relocatable modular office was provided using a single 8' x 20' Seabox unit, configured specifically for government business use. The unit featured a finished interior with durable flooring, electrical service, lighting, and an integrated wall-mounted HVAC system, along with secure entry and window grilles for added protection. Delivered and installed on-site in Washington, DC on the same day, the modular office met the client's operational needs while offering flexibility for relocation or extended use, demonstrating the speed and practicality of modular construction for government applications.
