

# NIH Temporary CT Modular

Bethesda, MD

## The Challenge

The National Institute of Health, in Bethesda Maryland, required space for a prototype Toshiba CT scanner. The temporary building had strict design guidelines in order to contain the weight of the machine and eliminate vibration.

## The Solution

Modular Genius provided a 630 sqft prefabricated building to house the massive scanner. The unit is divided into three areas, the control room, scan room, and equipment room. The exterior was finished to match the existing buildings.
